

MARS Recirculation Systems Are An Integral Component In Modern Water Meter Shops

Description

Designed for use with every MARS Test Bench System, the Recirculation provides the proper flow and pressure for each meter size configured. MARS Company recommends that each Recirculation System comply with AWWA and ISO standards and recommendations.

Hardware:

Each MARS Recirculation System is custom designed to meet the requirements for each Meter Shop operation. Our Systems include supply and return pumps, all System piping and valves, optional chlorination and filtration systems, and supply tanks configured to meet optimal test bench testing requirements. The Supply Tanks range from 200 gallons through 5000 gallons or more, and are available in high-grade polyethylene or stainless steel configurations.

Features & Benefits

- Immediate Reduction In Water Consumption.
- Dramatic Reduction In Test Water Dumped To Waste.
- Environmentally Friendly By Reducing chemicals released.
- Promotes Conservation.

Specifications

- Includes:
 - Supply & Return Pumps
 - All System Piping & Valves
 - Optional Chlorination & Filtration
- Supply Tanks Configured To Meet Optimal Test Bench Requirements
- Supply Tanks: 200g to 5000g +
- Available in High Grade Polyethylene Or Stainless Steel Configurations
- In Compliance To Meet Local, State & Federal Laws & Regulations.
